

=== Weekly Individual Report (Team 12: Time Capsule) ===

Name: Evan Zimmerman

Week 1 (Summary)

Date	Time	Commit	Summary
02/11/24	1 Hour	-	Reviewed react-native by looking at previous projects and working on a separate project to freshen up my knowledge.
02/12/24	1.5 Hours	-	Set up the GitHub and database to work with my laptop.
02/15/24	1.5 Hours	-	Familiarized myself with the base code for the project (the front end and the back end). Verified Expo works and I can run everything locally.
02/17/24	3 Hours	-	Walked through AWS server hosting and set up an EC2 instance. Looked into setting up elastic beanstalk to allow our server to run 24/7. Realized AWS is insanely complicated and there are much better services.
02/18/24	3 Hours	-	Set up a test repository and linked to a Vercel deployment for our server,

I don't have any commits this week because most of the week I spent familiarizing myself with all the technology we will be using, and planning out exactly how to set up the server. I used a copied testing repository on my GitHub account for this because I needed to be able to link stuff to a repository I own to test it. Once everything is working I'll walk Nathan through how to link the main repository to our server hosting service.

Week 2 (Plan)

Date	Time	Summary
02/22/24	3 Hours	Finish setting up the Vercel deployment and show Nathan how to link it to the main repo.
02/24/24	4 Hours	Work on the styling and implementation of the profile page.

02/25/24 3 Hours Work on the implementation of Spotify and Instagram account links.
